Generative adversarial networks(GAN)

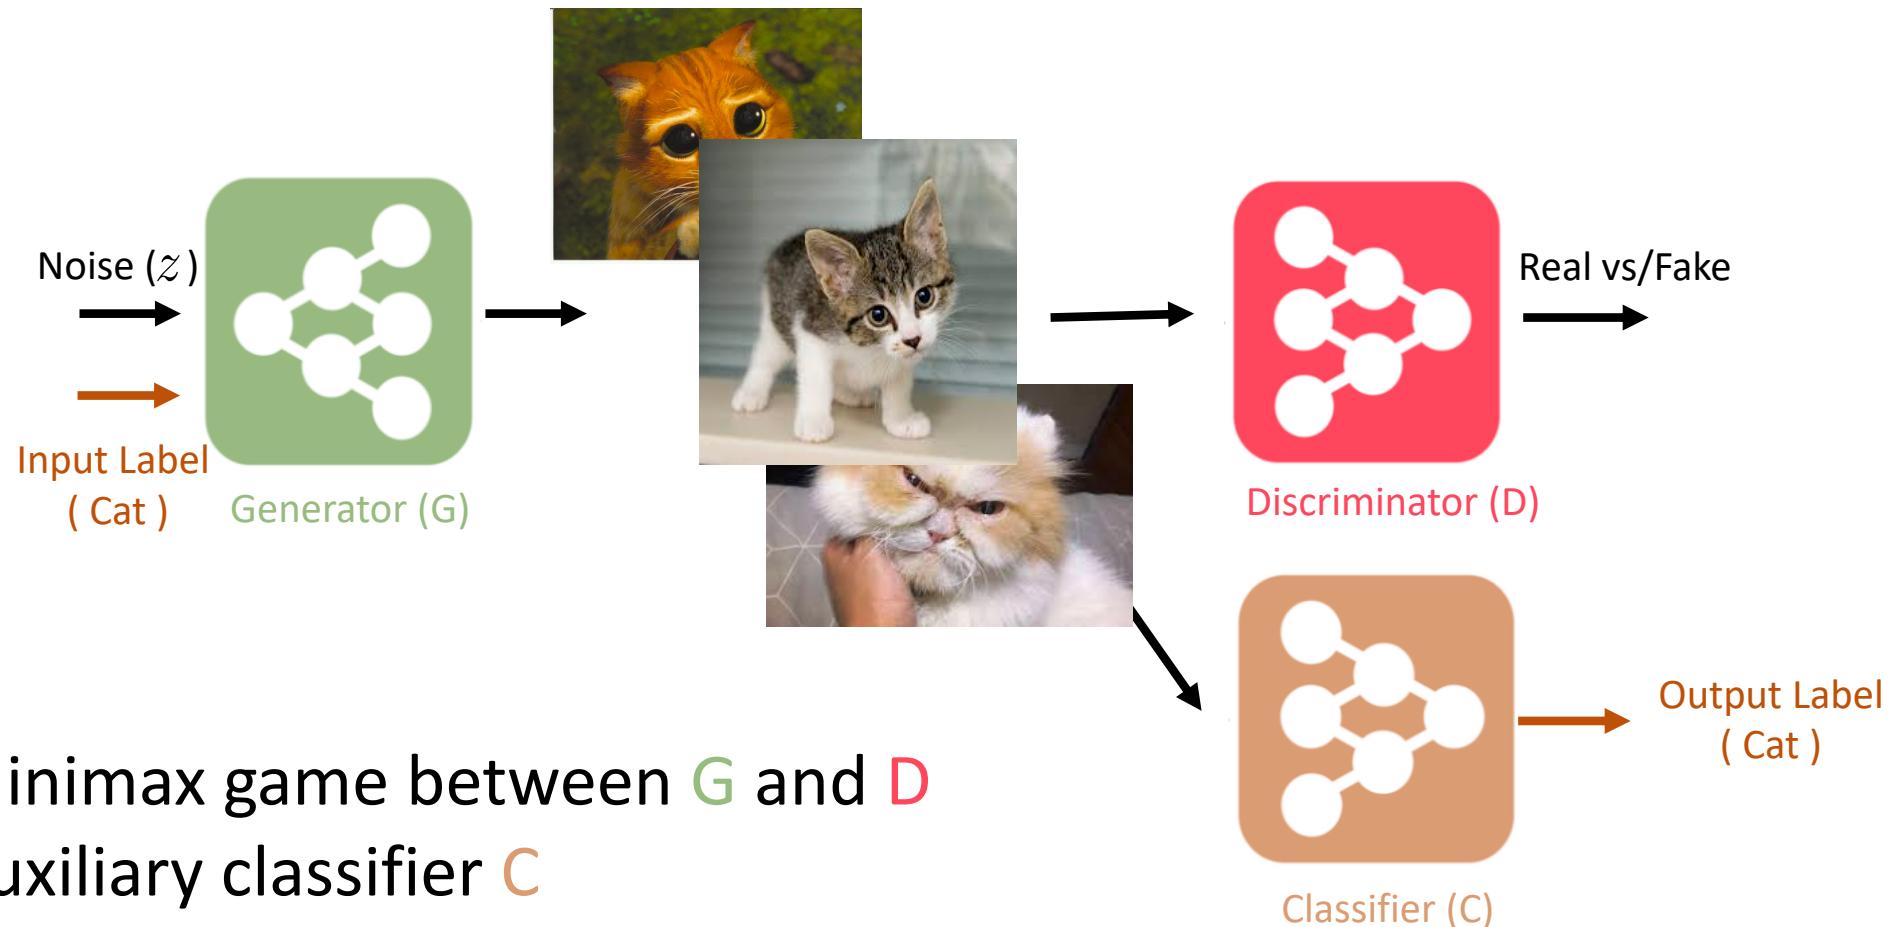

Minimax game between **G** and **D**

Conditional GAN(CGAN)

Minimax game between **G** and **D**

Auxiliary Classifier Conditional GAN(AC-GAN)

Issues with AC-GAN

Low diversity

Apple

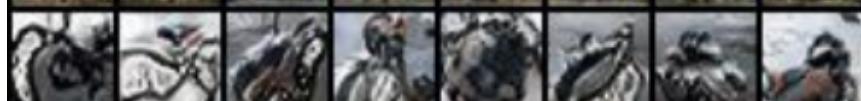

Fish

Tree

Motorcycle

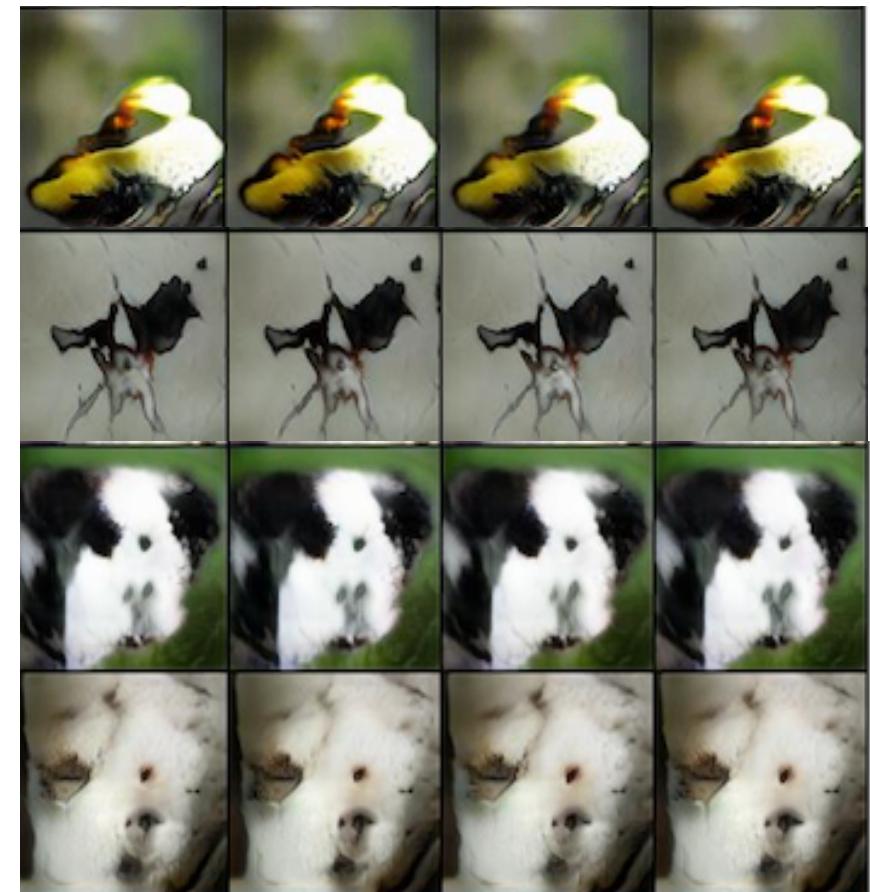

Mountain

CIFAR100

Tends toward mode collapse

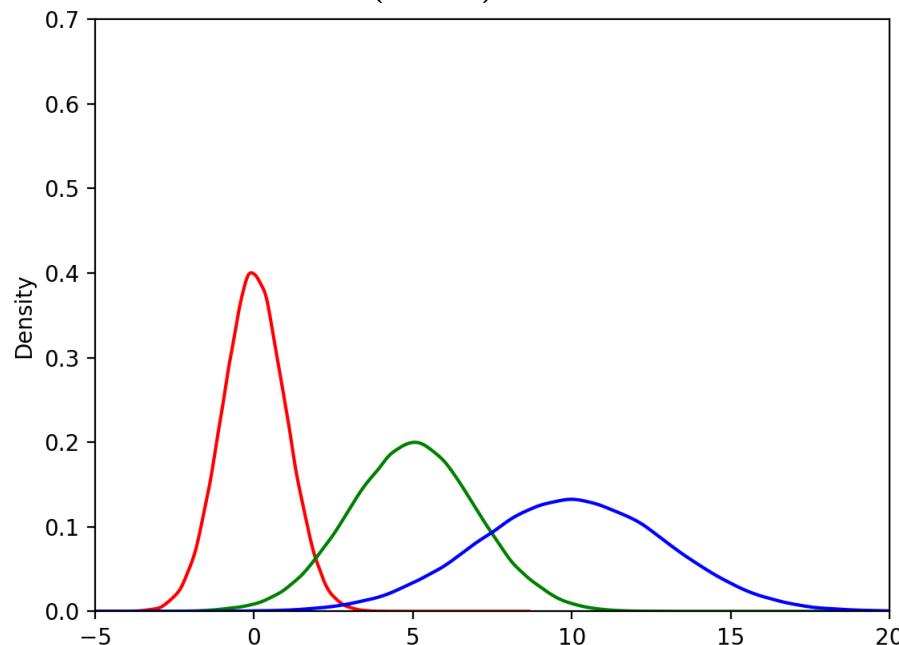

Imagenet1000

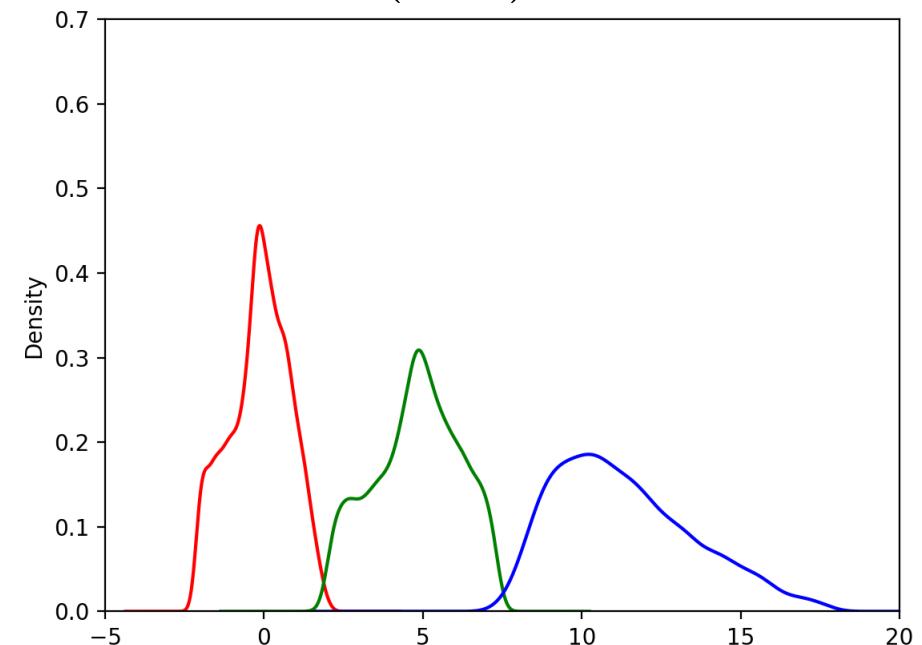

1D Mixture of Gaussian

- Class_0
- Class_1
- Class_2

True Distribution
 (P_X)

Estimated Distribution by AC-GAN
 (Q_X)

AC-GAN: Density Matching Point of View

P data distribution

Q estimated distribution

XY joint

Q_{XY}

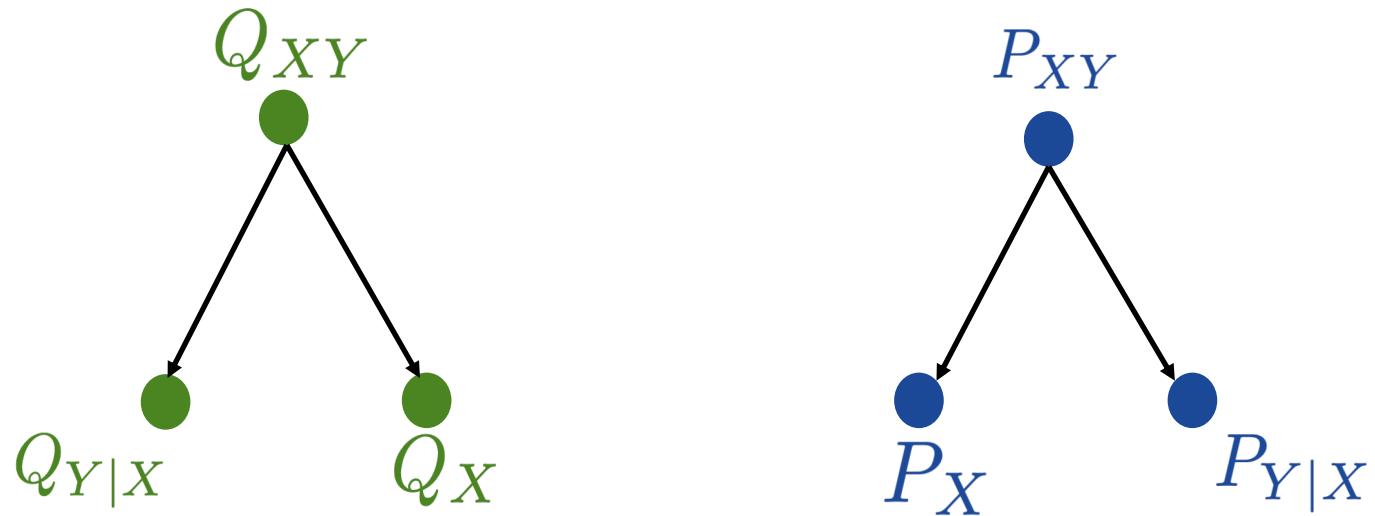

P_{XY}

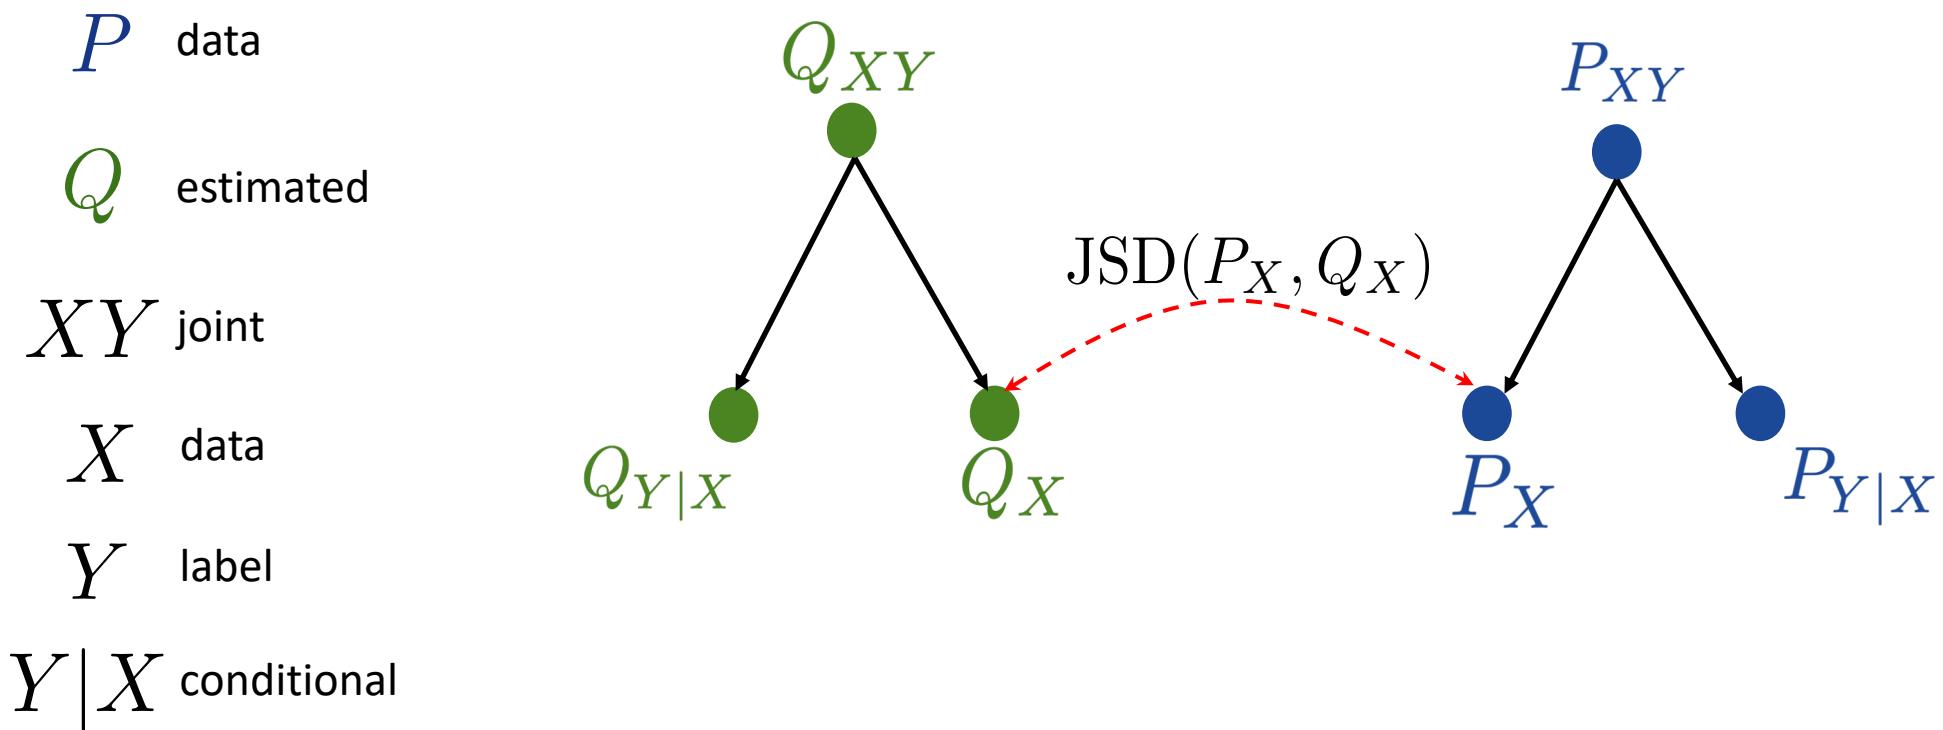

AC-GAN: Density Matching Point of View

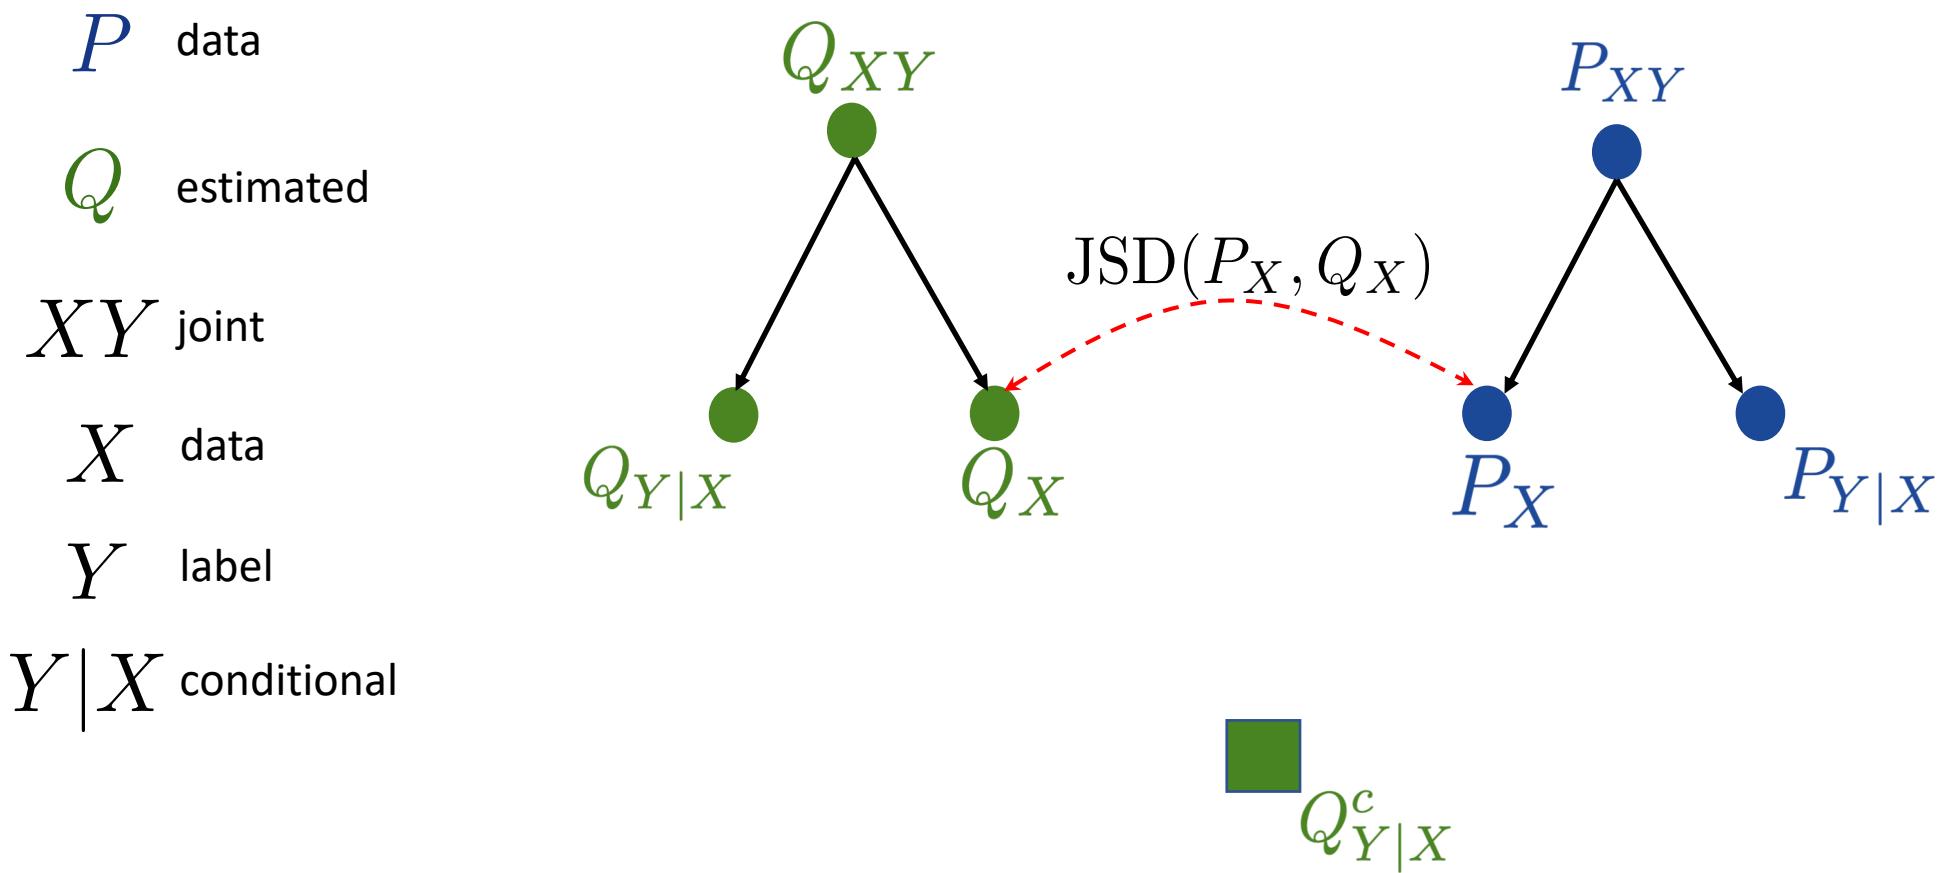

P data
 Q estimated
 XY joint
 X data
 Y label
 $Y|X$ conditional

Conversion to a Min-Max Game

Proposition:

- If $p(Y)$ is a uniform distribution, the following are equivalent:
 - Maximizing $H_Q(Y|X)$

Conversion to a Min-Max Game

Proposition:

- If $p(Y)$ is a uniform distribution, the following are equivalent:
 - Maximizing $H_Q(Y|X)$
 - Minimizing $I_Q(X, Y)$

Conversion to a Min-Max Game

Proposition:

- If $p(Y)$ is a uniform distribution, the following are equivalent:
 - Maximizing $H_Q(Y|X)$
 - Minimizing $I_Q(X, Y)$
 - Minimizing $JSD(Q_{X|Y=1}, Q_{X|Y=2}, \dots, Q_{X|Y=K})$

Conversion to a Min-Max Game

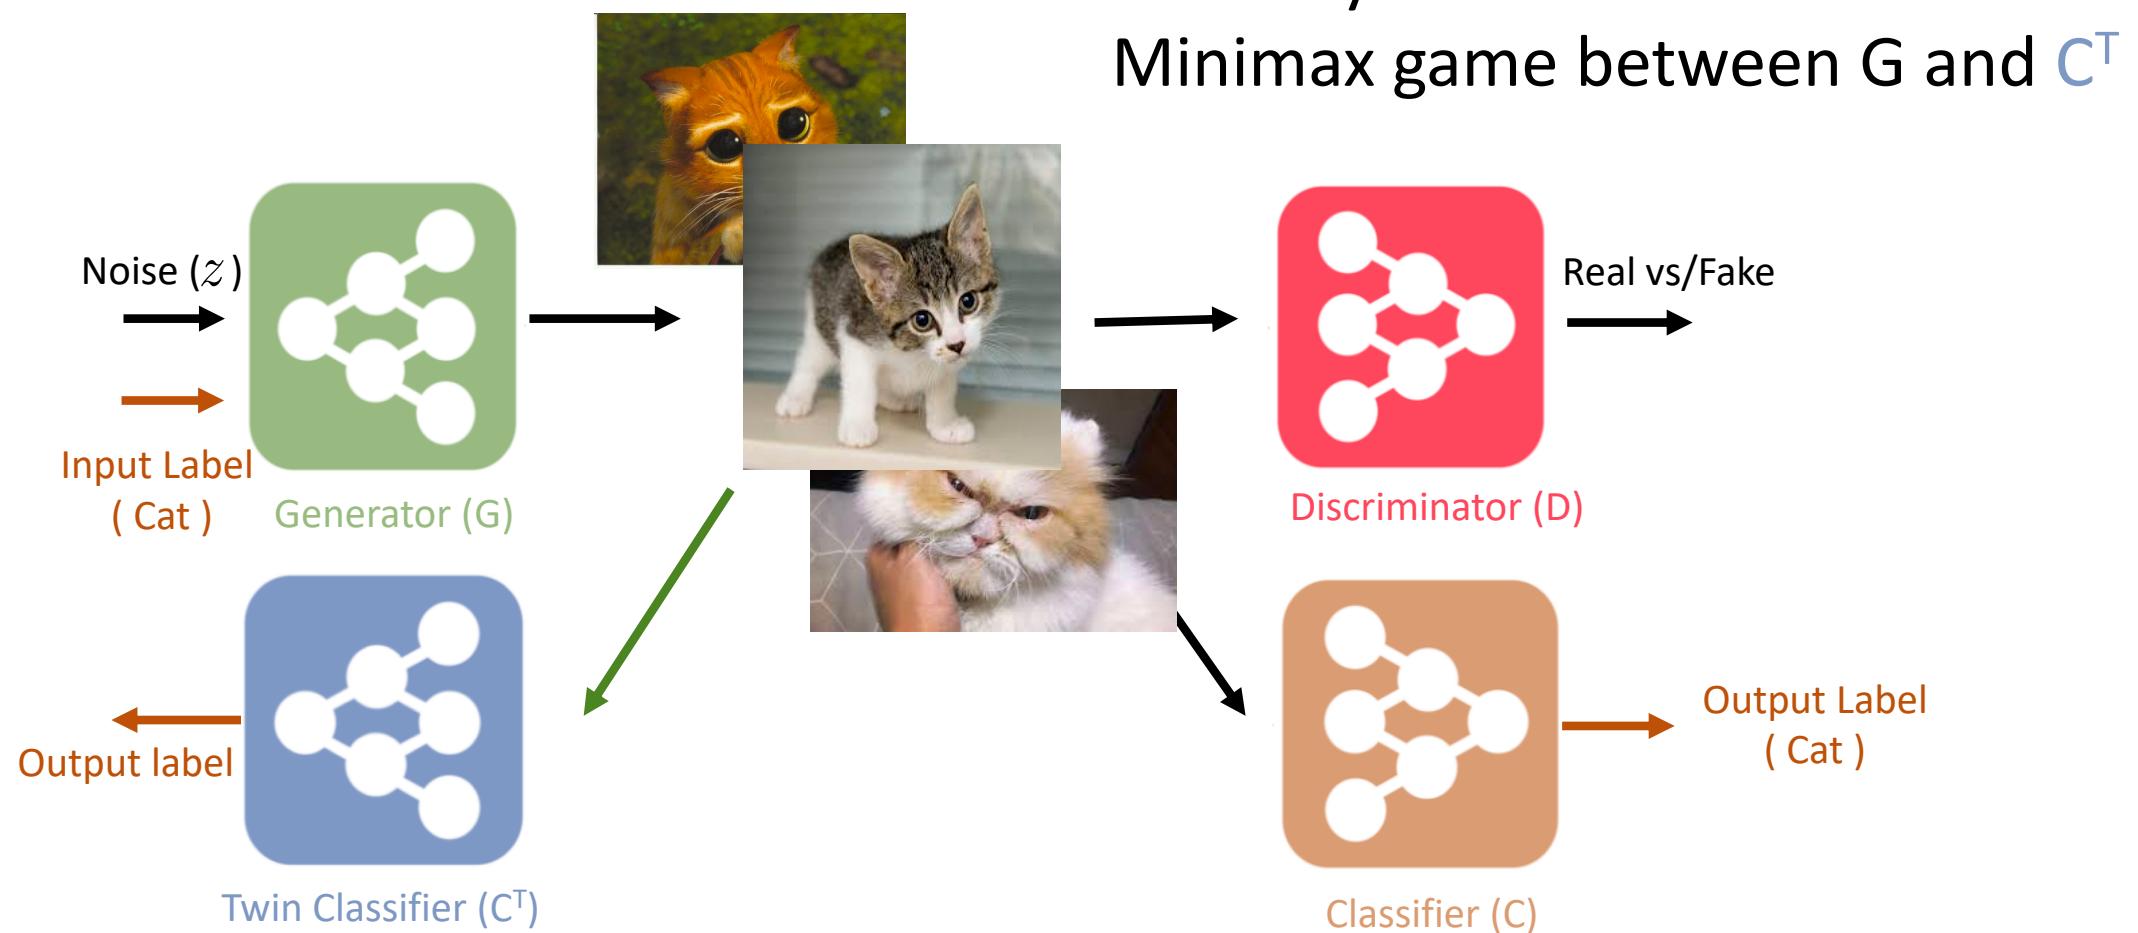

Proposition:

- If $p(Y)$ is a uniform distribution, the following are equivalent:
 - Maximizing $H_Q(Y|X)$
 - Minimizing $I_Q(X, Y)$
 - Minimizing $JSD(Q_{X|Y=1}, Q_{X|Y=2}, \dots, Q_{X|Y=K})$

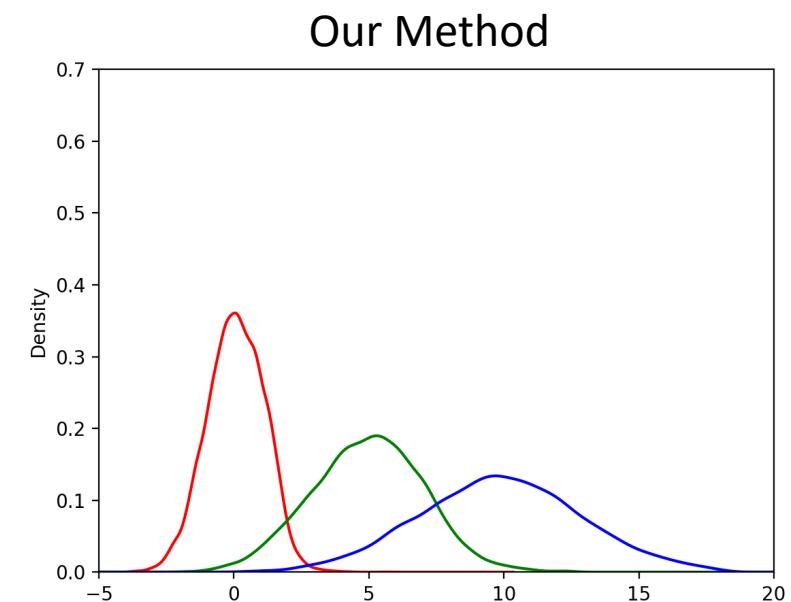

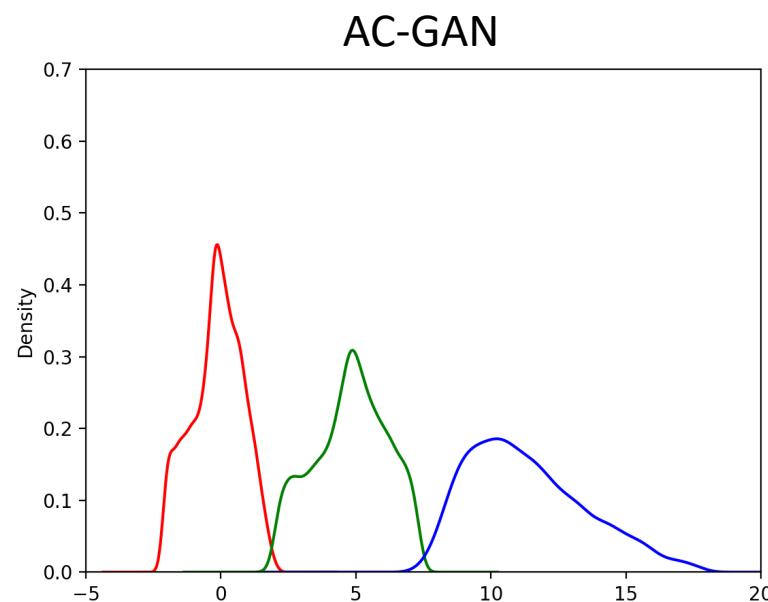

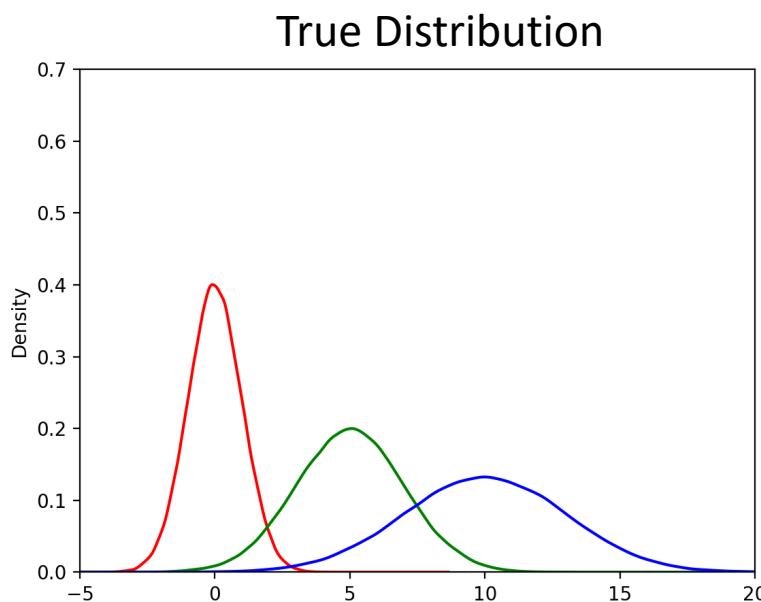

A Min-Max game can be introduced with a twin classifier!

Twin Auxiliary Classifier Conditional GAN(TAC-GAN)

Back to 1D Mixture of Gaussian
